German Innovation Award 2022: alphatronics ONE Awarded!

Nuremberg (Germany), 01.07.2022 – The alphatronics ONE satellite system has been awarded the Innovation Prize 2022 by the jury of the renowned German Innovation Award.

The future of the mobile satellite system

The alphatronics ONE is the first satellite system with GPS-supported coming home function! It is also the first satellite system able to be connected to an alarm system.

Coming Home Function: Unique and clever!

With the help of GPS and the integrated lighting system in the antenna, the alphatronics ONE guides you unerringly to your vehicle. Open the alphatronics ONE app and start the Coming Home function. Your smartphone turns into a digital compass and navigates you back to your parking space.

If you connect the alphatronics ONE to an alarm system from the market leader Thitronik, it becomes an optical signal generator. If the alarm system triggers in an emergency, the alphatronics ONE straightens up and, with the help of the integrated lighting system, displays a red glowing signal to the outside.
